                                            PubMed-11146551; DOI=10.1038/sj.coc.1204002; Germani A., Bruzzoni-Giovanelli H., Fellous A., Gisselbrecht S., Varin-Blank N., Calvo F.; Sipha-Lubulin and degrades the kinesin Kid by the proteasome pathway during mitosis."; Oncogene 19:5997-6006(2000).
-: FUNCTION: Kinesin family that is involved in spindle formation and the movements of chromosomes during mitosis and meiosis. Binds to microtubules and to DNA.
-: SUBCELLULAR LOCATION: Nuclear.
-: FTM: Ubiquitinated; mediated by SIAH1 and leading to its subsequent proteasomal degradation (Probable).
                                                                                                                                                                                                                                                                                                                                                                                                                                       R MIM; 603213; -

Varin-Blank N., Calvo F.;

"SIAH-1 interacts with alpha-tubulin and degrades the kinesin Kid by

"The proceasone pathway during mitosis.";

Oncogene 19:5997-6006(2000).

-I- FUNCTION: Kinesin family that is involved in spindle formation and

microtubules and to DNA.

-I- SUBCELLULAR LOCATION: Nuclear.

-I- PTW. Ubiquitinated, mediated by SIAH1 and leading to its

subsequent proceasonal degradation (Probable).

-I- SIMILARITY: Belongs to the kinesin-like protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DR GG; GO:0003677; C:kinetochore; TAS.

Title:

Perfect score: 1768
Sequence:

Scoring table: BLOSUM62
Gapop 10.0, Gapext 0.5
Searched: 1825181 seqs, 575374646 residues

Total number of hits satisfying chosen parameters: 1825181

Minimum DB seq length: 0 Maximum DB seq length: 200000000 Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"SIAH-1 interacts with alpha-tubulin and degrades the kinesin Kid by T the proteasone pathway during mitosis.";

"Oncogene 19:5997-6006(2000).

"I PUNCTION: Kinesin family that is involved in spindle formation and the movements of chromsomes during mitosis and meiosis. Binds to microtubules and to DNA.

"SUBCELLULAR LOCATION: Nuclear."

"I SUBCELLULAR LOCATION: Nuclear."

"I SUBCELLULAR LOCATION: Mediated by SIAH1 and leading to its subsequent proteasomal degradation (Probable).

"I SIMILARITY: Belongs to the kinesin-like protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
